

General Safety Using Ceramic Materials

- Please use caution when using ceramic materials. Commercial glazes are labeled as non-toxic or health-caution as determined by their ingredients
- You should wear a respirator when working with dry chemicals such as clay and glaze ingredients, pre-mixed dry glazes, and when spraying glazes
- Don't eat, drink, or smoke when working with glaze chemicals. Wash hands thoroughly with soap and water. Use a damp mop or sponge for clean up.
- Please test clay and glazes before entering production. Raw materials are present in all ceramic glazes and clays, and can cause changes in clays and glazes over time. Our suppliers do their best to ensure a top quality, highly tested product, but individual firing situations, type of kiln, etc. can cause changes in your results.
- The following section lists our available dry chemicals and clays - if you need something not listed, please let us know and we will check on availability for you. We sell in 1# increments.
- We also offer advice on recipes and mixing - call us if you need assistance.
- UPS imposes a \$15.00 Hazardous shipping fee on some chemicals. Call for Details.
